

Automation Check Up/Obsolescence Plan

This Automation Check Up & Obsolescence Plan becomes a valuable tool when identifying what systems to prioritize in the capital plan and allows peace of mind to understand what risks are currently being assumed by the manufacturer and which ones are over the risk tolerance level. .

Upon completion of the obsolescence assessment, we're able to catalog the systems that exist, prioritize the impact of failure based on severity and availability of replacement parts and layout a program of upgrade over a selected duration based on impact and cost.
