AVEVA™ Operations Control

Aligning teams towards operations excellence

AVEVA Operations Control brings the software your teams need to operate at their best. Give all of your users actionable information to drive better decisions in real-time to excel and drive increased operational efficiency, reliability and agility with a cohesive and sustainable software framework, from edge to enterprise.

This new unlimited offer represents a step change in helping speed up time to value through seamless accessibility to our robust portfolio, going beyond HMI and SCADA to include manufacturing execution, analytics and rich cloud-based capabilities that unlock greater insight and collaboration.
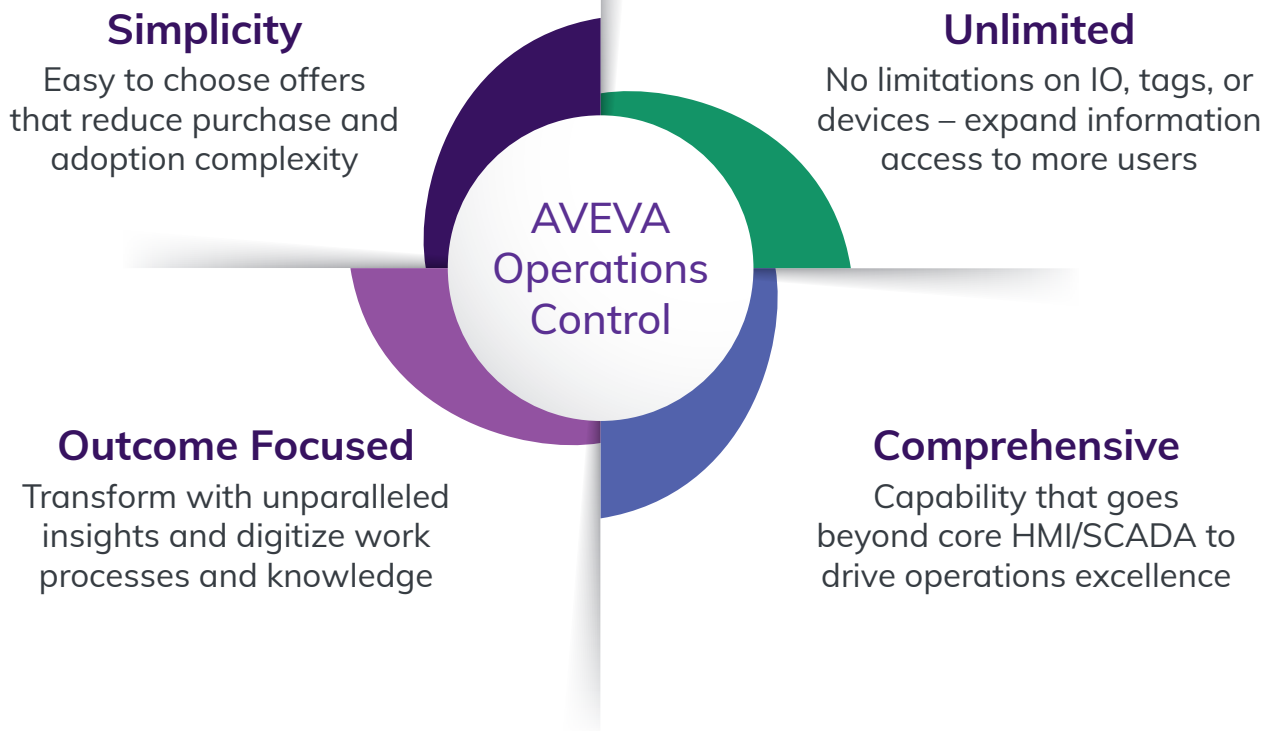

Every team, whether on the plant floor, in the control room, or operating across the enterprise is empowered to do more, in alignment with each other. Build your foundation towards operational excellence with AVEVA Operations Control.

Benefits

- Access to our comprehensive portfolio of world class software technology at the scale that makes sense for you

- Commercial and architectural flexibility with hybrid IIoT deployment

- Access integrated support and the latest product updates at no additional cost

- Future proof your business with the strategic partner that has a vision for driving holistic operational value

Features

- Based on number of users

- Unlimited scalability with unlimited tags, IO, HMI/SCADA clients

- Flexible architecture blends cloud and on-premises tools

- Unlimited development users

- Comprehensive communication drivers library

- Collaboration and skills management

- System health and diagnostic tools

- Built-in technical support and version updates

Simplicity
Easy to choose offers that reduce purchase and adoption complexity

Unlimited
No limitations on IO, tags, or devices – expand information access to more users

AVEVA Operations Control

Outcome Focused
Transform with unparalleled insights and digitize work processes and knowledge

Comprehensive
Capability that goes beyond core HMI/SCADA to drive operations excellence

Operations as your foundation

Achieve operational excellence from edge to enterprise.

AVEVA Operations Control are subscription offers offered through AVEVA Flex. They deliver added value to organizations of any size with the flexibility to access the most comprehensive industrial operations management software and scale as their business requirements change.

These unlimited subscriptions enable a comprehensive set of software applications to improve operations, performance, safety, quality, and overall profitability. AVEVA Operations Control features rich capabilities inclusive of HMI/SCADA visualization, mobility, analytics, reporting, workflow, and development tools in a hybrid cloud and on-premises configuration.

Moreover, the unlimited usage model eliminates constraints like the number of tags, devices, and servers. This disruptive model offers unparallel flexibility and convenience providing this comprehensive software portfolio as a combined subscription!
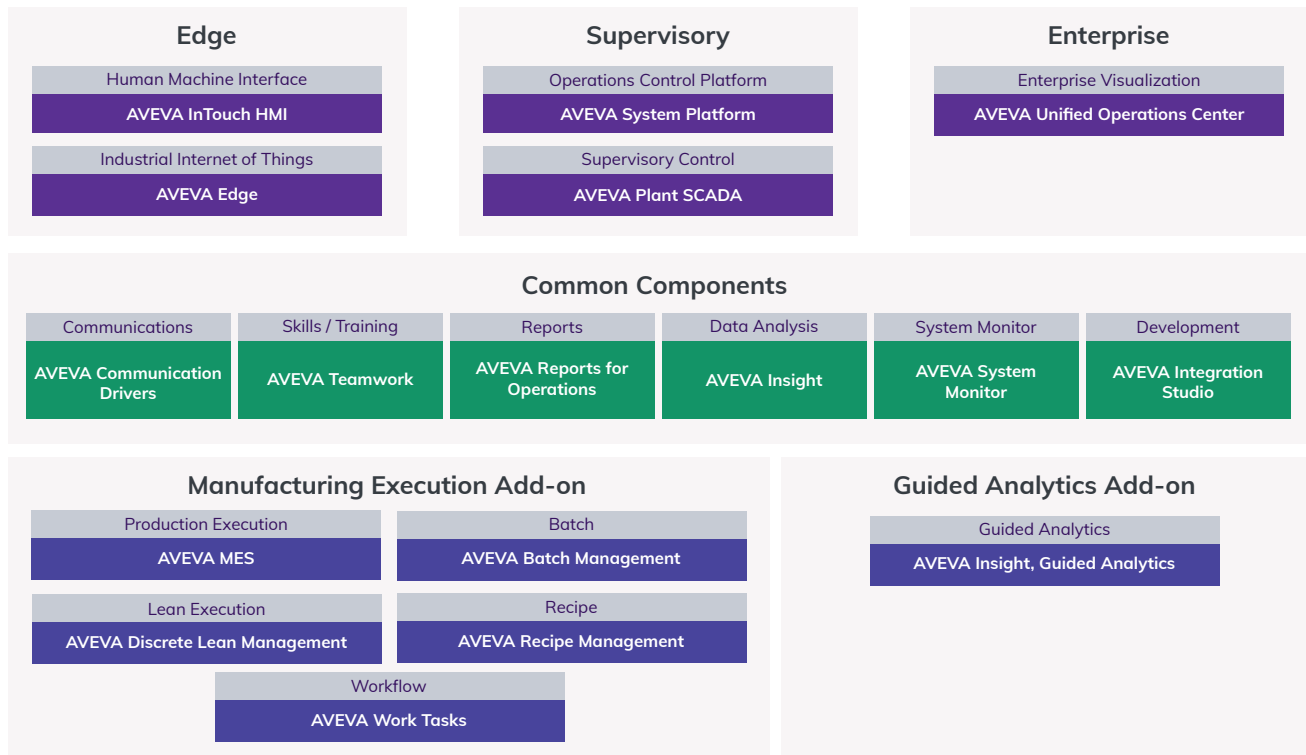

Which offers is right for me?

Three core offers (Edge, Supervisory and Enterprise) provide all the tools necessary for Plant/Field, Control Room, and Enterprise teams to drive actionable information, collaborate effectively, and accelerate their operational excellence. Add-on offers for Manufacturing Execution and AVEVA Insight, Guided Analytics provide advanced functionality including MES, work flow management and AI.

Edge	Supervisory	Enterprise
Perfect solution for frontline teams that require local process monitoring and control at the asset, equipment or line level with IIoT and embedded HMI capabilities.	Ideal for centralized management of distributed SCADA or operations into single unified plant model aimed at driving standardization across departments.	IT OT convergence platform aimed at driving collaboration and enterprise visibility across regional or global operations.

Guided Analytics Add-on

Guided Analytics
AVEVA Insight, Guided Analytics

Operational flexibility, simplicity and improved experience

These subscriptions are a revolutionary approach to acquiring, deploying and maintaining industrial software without incurring unforeseen or incremental licensing costs based on varying operational or personnel turnover changes.

AVEVA Operations Control is based on named user licensing with unlimited use of all capabilities within the offer. Moreover, the named user licensing model provides simplified license management avoiding excessive costs due to overages in pay-per-use and usage-based models. For example, if a solar farm power generation company has 4 shifts of ten people each, they would have a total of 40 named users and hence require a medium sized offer.

During the agreement term, benefit from increased agility by accessing any of the included software without having to place additional orders or change license agreements. In addition, a convenient administration portal allows you to manage and easily add capabilities and users at the pace of your business growth.

Transform your operations

AVEVA Operations Control provides the operational excellence software necessary for the modern industrial operations environment and gives teams a consistent method of collaborating and operating from a cohesive and sustainable framework.

Across both on-premises applications and cloud infrastructure, you have the power to choose the configuration, architecture and deployment option that meets your business requirements. This hybrid cloud and on-premises offering provides a frictionless, integrated user experience that enables organizations to access information and functionality from across AVEVA's broad range of proven applications: from real-time HMI SCADA process data, Manufacturing Execution System, to Asset Performance Management.

Transform your operations with unparalleled insights and digitize work processes and knowledge:

- Empower the frontline operator with mobility through proven unlimited HMI visualization and utilize the cloud to enhance collaboration and knowledge sharing to drive continuous improvements

- Leverage cloud capabilities for development, visualization, and storage to drive engineering efficiency and standardization across the enterprise

- Augment real-time and historical process data with cloud-based machine learning AI capabilities to predict possible faults or failures and be proactive

Empower your teams with AVEVA Operations Control to speed up your time to value with the software they need to drive improved decision making.
